IE 421/428: Information Systems Analysis and Design

(Dr. Xueping Li)

Homework Assignment (WWW - Build a site for your CV!)

1: Build a responsive web site to host your resume.

Use the W3.CSS templates(e.g., "CV Template" or others) from the website (https://www.w3schools.com/w3css/w3css_templates.asp) or templates from <https://html5up.net/>. You don't have to use all the "real" information but make sure to have all basic information in the template. In addition, add a new section ("Courses") to list a few key IE courses. Add a "Projects" or "Co-op" section. In the Education section, add a URL to ise.utk.edu and/or www.utk.edu. In the skills section, add a few IE skills. Add some "Big Orange" color to some of the items. (Tip: use w3-orange CSS class to replace "w3-teal".) Add proper web links to the footer (social media).

Feel free to add more information but these are the minimal requirements for this homework. Be creative & professional. Do feel free to use other templates. For example, there are many at <https://html5up.net/>.

Submission Guideline:

- 1) Zip your whole folder (use your name as the folder name) and all the files in it and upload this zipped file to Canvas.
- 2) Create a repository on GitHub (your own account) and upload the CV folder there. Then, turn this repo into a Github Page. (We will learn this on 4/4/2019)
- 3) Go to https://github.com/ILABUTK/utk_ie421_2019/wiki. Edit the page to add your name and a link of your Github Page.
